Abstract (en)
[origin: EP0948112A2] The motor protection arrangement has a first transducer (11-13) per phase and an electronic overload protection circuit connected to the secondary windings (14-16) of the first transducer. The secondary windings of the first transducer form the primary conductors of further transducers inside the electronic overload protection device. The further transducers and evaluation elements are housed in an overload relay housing inside the motor protection device.
