Abstract (en)
[origin: DE19652575A1] The invention concerns a method of producing a chocolate hollow body by means of which method a chocolate hollow body with at least one first and one second chamber separated by a partition wall can easily be produced. To that end, chocolate mass is poured in metered manner into a first part of a hollow mould which is divided into at least a first and a second part. The first mould part is closed with a cover and centrifuged until a partial hollow body with the first chamber and a wall formed on the cover is produced in the first mould part. The cover is then removed and the second mould part, which is filled in metered manner with chocolate mass, is placed on the wall and centrifuged until a second partial hollow body integrally formed on the first partial hollow body and having the second chamber is produced in the second mould part.
