Abstract (en)

[origin: WO9821411A1] The invention concerns a substructure (1) for a railway vehicle track formed from rails (4), said substructure (1) comprising resilient bearings (2) for the rails (4), the bearings being disposed at spacings. According to the invention, each bearing (2) has a recess (3) for one of the rails (4). Filler members (5) secured by screws (7) are located between each rail (4) and the respective recess (3). Furthermore, the resilient mounting of the rails (4) is brought about by intermediate layers (6) of a resilient material disposed between the rail (4) and the filler members (5).
