Abstract (en)

[origin: WO9813564A1] A weather protection system (10) for mounting on a scaffolding (18) consists of a tarpaulin (26) which is secured to horizontal (14) and/or vertical (16) stays of a scaffolding (18). A second, outer tarpaulin (28) substantially parallel to and spaced apart from the inner tarpaulin (26) secured to the scaffolding is joined in such a way to the first tarpaulin that a substantially closed, air-tight space is created between the inner and outer tarpaulins. The space (38) is in communication with an air supply device, such as a fan (44) or air conditioning system, which generates an overpressure inside the space.
