Abstract (en)
[origin: WO9821435A1] An elongate structural element for a window, door, or like structure, comprising a hollow, elongate UPVC or similar plastics structural member (11), and an elongate metal reinforcing member (12) housed within the structural member, said reinforcing member having at least one protrusion so shaped as to engage the structural member to take up clearance, at least in one plane, between the reinforcing member and the interior of the structural member and so to retain the reinforcing member in position longitudinally within the structural member, said protrusion being arranged to provide substantially the same resistance to movement of the reinforcing member relative to the structural member in either longitudinal direction.
