Abstract (en)

[origin: WO9820463A1] The present invention pertains to a device enabling an apparatus (10) to be fitted with an acknowledgement unit (20). The device comprises, on the side of the apparatus, a transmitter (11) for sending an enquiry signal and, on the side of the acknowledgement unit (20), a processing unit (21 to 24) equipped with an enquiry signal receiver, which sends a contact signal when the enquiry signal corresponds to a set reference signal. The contact signal is generated by the processing unit (21 to 24) after expiry of a set delay time (T2, T6), which is specific to a certain acknowledgment unit (20) and starts running upon reception of the enquiry signal.
