Abstract (en)

[origin: EP0948973A1] The nozzle body has a valve body (3) held closed by a holder (5) which is secured by a thermal release element (6) and has a lever arm (13) protruding on one side. A bearing lever (4) is mounted on the nozzle body opposite the protruding lever arm so that the thermal release element is between the lever arm and lever at the side next to the nozzle body. The protruding lever arm is resiliently pretensioned to support the thermal release element. The valve body can be a ball.
