Abstract (en)

[origin: EP0949134A1] The system has two IR optics (8,9) are arranged at one, especially respectively at both, rail track outer sides, which have normal distances to the rail, which differ from each other. Each IR optic is assigned an own detector (12). IR optical elements especially mirrors (13), prisms or similar are arranged exclusively fixed in only one position, in the beam paths from the bearings to be measured until the respective detectors are reached, related to the inclination of the axes of the IR optics.
