Abstract (en)

[origin: EP0949377A2] The present invention relates to a continuous drying apparatus for porous web. The continuous drying apparatus for porous web, comprises a porous web (102) for traveling on a drying line, a heating cylinder (101) for contacting the porous web (102) at its circumferential surface and rotating in synchronization with the travel of the porous web (102) to heat the porous web (102), a drying band (104) for contacting and supporting a surface of the porous web (102) which is out of contact with the heating cylinder (101) and also for rotating in synchronization with the travel of the porous web (102), and a pressure rotating body (115) disposed near the circumference of the heating cylinder (101) and outside the drying band. The pressure rotating body (115) is constructed of a rotating member (107) for rotating and contacting an exterior surface of the drying band (104) and pressure means (108) for pressurizing the rotating member (107) toward the heating cylinder (101). With this, porous web can be efficiently dried. <IMAGE>
