Abstract (en)
[origin: EP0949833A2] The mobile radio communications device stores an access number for a calling-card service and a corresponding personal identification number, which are transmitted after the access authorization for the radio communication network is verified. The device may store two or more different calling-card service access numbers for use in different countries Also included are Independent claims for the following : (a) a subscriber identification module card for a mobile radio communications device; (b) a mobile radio network for speech and data communication
