Abstract (en)
[origin: WO9830440A1] A steering and/or propulsion device for a vessel, preferably for installation in the bow portion of the vessel, comprising a propeller nozzle assembly (1) adapted to be rotated 360 DEG about its vertical axis (2). The propeller/nozzle assembly (1) is provided for two active drive positions, one position (O<N>) below the bottom of the vessel and one position (O<O>) in a preferably downwardly open channel (3) in the bottom portion of the vessel, whereby the direction of the rotational axis of the propeller is coincident with the axis direction or longitudinal direction of the channel. The propeller/nozzle assembly (1) can be reversed also in the upper operative position.
