Abstract (en)

[origin: EP0950781A1] The platform is composed of a horizontal frame (6) with horizontal cross members (8) supporting a grating (9). Transverse tenons (10) project from the frame and engage in vertical shafts (15) arranged around the pool. Lifting cables (20) are attached to the tenons. Each cable runs along the pool on return pulleys (46) and follows a vertical trajectory. A cable pulling hydraulic actuator (50) is operated by an external control box (56).
