Abstract (en)  
A locking device (1), specifically designed for application to gates (20), comprises an outer body (2,3) and a lock (4) operatively coupled to one another. The device (1) comprises moreover a sliding locking element (9) for locking a gate (20), which locking element (9) is operatively coupled to counter-biasing mechanical means (12) which is in turn kinematically coupled to the lock (4). <IMAGE>
