Abstract (en)

[origin: EP0950785A1] The hinge comprises an auxiliary casing (41) which is introduced inside the chamber (5) of the section (6) and fixed in the internal surface of the chamber front wall by its front (43). The casing has an internal cavity (45) for receiving the sliding auxiliary door bolt (22). On the cavity internal surface and the bolt external surface are complementary shapes (67) in the transverse direction which engage each other to ensure guiding of the door bolt.
