Abstract (en)
[origin: WO9628696A1] The invention concerns a heating device with a first heating element (100) and a covering (10); the first heating element (100) comprises (preferably vertical) collecting tubes (150), and, connected thereto, (preferably horizontal) heating tubes (152). The heating device is also provided with a forward flow duct and return flow duct (114 and 116 respectively), and according to the invention the covering (12) is of such an extent that the region between the collector pipes across the width of the latter is substantially covered, while the region along the principal length is partially exposed to cover at least partially the forward flow and return flow ducts.
