Abstract (en)
[origin: EP0951002A2] A domestic electric installation (10) linked to a computer (17) and an information/control system (16) includes a number of sensors (12) and actuators (14). The sensors act as probes for conditions like brightness, temperature, humidity, pressure and noise, as well as for movement detectors, level indicators and monitoring devices. The actuators work as switching devices for lighting appliances, motors, drive mechanisms for blinds and heating valves.
