Abstract (en)
[origin: EP0849093A1] The form (1) has a removable card (2) is integrated into it and is attached at least partly to the surrounding material at its outer (3) edge by bridge formed by a predetermined fracture line. In this line the material is thinner than the overall thickness of the form. Preferably the bridge is one layer making up the thickness of the form material, the remaining layers being cut through along the card edge and the bridge. In particular, the bridge layer is an inner layer and outer layers are separated along coincident cutting lines. The bridge may have a sawtooth shape or can form perforations. The card may be a self-adhesive label.
