Abstract (en)  
[origin: WO9826938A1] The inventive form (1) is characterized in that the removable integrated card (2) is at least partly connected bridge-like to the surrounding material along the external form edge, while the strength along the bridge is, on all this length, smaller than the total form thickness. The bridge consists preferably of a partial layer (9), all other layers (10-13) being separated. The card can simply be designed as a sticker and/or a so-called butterfly-card, which only requires one side or both sides to be plasticized. It also can be part and parcel of a label or include one.
