Abstract (en)

[origin: WO9832245A1] Satellite footprints (16a, 16b, 16c) are partitioned into elongate spanning cells (18) and multiple elongate segments (22). The elongate spanning cells (18) resemble long strips that extend along an entire footprint (16a, 16b, 16c). The alignment of the elongate spanning cells (18) along a footprint (16a, 16b, 16c) is determined by a correction angle PHI, which compensates for the changing relative motion of the Earth's surface at various latitudes.
