Abstract (en)

[origin: EP0951860A1] A dishwasher, washing machine or the like, including a flood-preventing device consisting of a bottom tray (1) suitable to collect the water leaking from any component of the machine, a float (2) in the tray (1) and a microswitch (6) which can be activated by the float (2) as soon as the water collected in the tray (1) causes the raising thereof, is also provided in the tray (1) with a hole which is water-tightly closed by a deformable diaphragm-shaped member (7) so that the float (2) can be raised by pushing upwards on said diaphragm (7). <IMAGE>
