Abstract (en)

[origin: EP0951974A1] The holder has a mating pin (6) inserted into the contact surface of a base body (1) that engages an opening in the blade plate (3) at a radial distance from the radially inner blade plate edge to secure the blade plate radially in the blade head by shape locking. An aperture (3d) in the blade plate between the opening and edge in the form of a flat channel-like recess is radially aligned with the mating pin and its width corresponds to the pin diameter.
