Abstract (en)

[origin: EP0951995A1] Some of several rollers have their own drives. The rollers (5,7,9,10,14-17) which do not have their own drive mechanisms are in direct contact with at least one roller (4,6,8,11-13) which does possess its own drive mechanism. Those rollers with their own drives are driven according to the circumferential speed of the plate cylinder (18). At least one of the rollers possessing its own drive has a drive derived from the rotary movement of the plate cylinder.
