Abstract (en)
[origin: EP0952263A2] The collar (30) limits an upwardly open ring chamber (34), in which normally water (36) is collected, and which has a free overflow edge (32), via which the water reaches the sewage duct. A ring-shaped floating body (38) is provided, located in the ring chamber and can move vertically, floating normally in the water in the ring chamber. A ring-shaped, gastight apron (40) is provided, which has lower and upper edges, the lower edge being connected in a sealed manner with the floating body. An odour filter is provided (42), connected in a sealed fashion with the upper edge of the apron, closing the apron upwards like a cover.
