Abstract (en)

[origin: EP0952267A2] Panels of netting or mesh are held in rectangular frames made of extruded profiles (4). They may be fastened together to form a fence, using special links (10). The links are metal straps with rounded ends with C-shaped cutouts (15). The cutouts may be in line with the axis of the strap, or one or both of them may be at right-angles to the axis. The cutouts accommodate fastening bolts running vertically through the central bores (7) of the frame members. Circular cutouts (18) in one flat surface at the ends of the straps accommodate bolt heads or nuts to hold the straps in position.
