Abstract (en)

[origin: EP0952297A1] The roller shutter case has in its base on the exterior side a 5 cm edge (3). On its top part, in internal alignment with the masonry (2) is a 5 cm rail (8). A metallic trellis (5) connects these two parts. The trellis exceeds by 15 cm, each end (1) of the shutter, ensuring also during the procedure of the fixing of the lintel (6) in the masonry (2), the risk of cracks are avoided.
