Abstract (en)
[origin: US6216716B1] The mosquito net of a mosquito-tight material (5) is characterized in that a closed, endless band (2) made of a flexible material is provided, which can be moved from an unstable balance position with a rolled-up or folded configuration into a stable balance position with an expanded configuration. Thereby the mosquito-tight material (5) is secured to the flexible band (2) in such a manner that in the expanded position an inner space, separated from the outer space by the mosquito-tight material, is created.
