Abstract (en)

[origin: EP0953534A2] The collector pockets (7) are moved along a horizontal (2) track. A feeder (10) supplies the overlapping sheet-products next to the track. Each collector pocket has a deflector (13) element which moves so that the front edge of a sheet is gripped and deflected into a collector pocket. Each deflector element is positioned on an operating shaft (12).
