Abstract (en)  
[origin: EP0953681A1] The base plate is supportable on a sleeper by projections. Indirectly or directly from the base plate extends an inherently rigid, flat intermediate insert (44), the support side surface of which in relation to the base surfaces of the projections (16,18,20,22,24,26), are set back in the direction of the base plate with normal force input. With unsuitably high force input on the base plate, the rigidity of the intermediate insert is provided by resting on the support. Between the intermediate insert (44) and the base plate is a section of the intermediate layer.
