Abstract (en)

A hinge for casements in general and for outdoor casements in particular, comprising a first element (2) and a second element (3) which can rotate with respect to each other and can be coupled to the fixed structure (10) and to the casement (11) respectively. The hinge (1) for casements comprises at least one hollow screw (20) provided with an external thread (21) for coupling to the fixed structure (10) or the casement (11) and with an internal thread (23) for coupling to the threaded shank (24) of one of the elements (2,3). The external thread (21) is different from the internal thread (23) in order to produce, upon the rotation of the external thread (21), a translatory motion of the threaded shank (24). <IMAGE>
