Abstract (en)

[origin: EP0953713A2] The fastening has two rectangular doors (8,9), which are parallel to each other and run in side guides (17,24). The two fastening elements are movable from their fastened position in which they are adjacent and do not overlap into an open position in which they completely or nearly completely overlap, and vice versa. The top and bottom parts of the side edges of the doors have guide-pieces (15,16,21) running in the guides belonging to each door and spaced so that the doors can overlap. The doors are joined by at least one flexible pull (31) running over a deflector roller (30) to a fixed point (35,36).
