Abstract (en)  
Compact mechanical-electrical transducer (10), comprising a compact alternator (1), which absorbs variable mechanical energy from a drive shaft and provides in output an alternating voltage (VA) whose frequency is variable according to the number of revolutions of said shaft, in such a way as to power, with said alternating voltage (VA), an inverter (2) which in turn comprises a first rectification stage (21), and a second stage (22) for reconverting the direct voltage into alternating voltage, whose parameters can be programmed and set by the user. <IMAGE>
