Abstract (en)

[origin: FR2757029A1] The invention concerns a manual dispenser of fusible substance, in particular of depilatory wax (5), comprising a case (10) forming a manual prehensile organ inside which is arranged a reservoir (12, 16, 18) of solid granulated fusible substance or in the form of a cake and means (30) for heating this fusible substance. More particularly, heating means (74) for initial fast melting of the wax are arranged in substantially homogeneous manner in the whole volume of the reservoir, or (32, 50) along one or several surfaces capable of passing in a mobile way substantially through the whole reservoir. In a first embodiment, the heating means are in the form of a grid (32, 50) formed by resistive heating wires initially arranged against one side of the reservoir and capable of moving to the opposite side. In a second embodiment, the heating means are made up of a resistive electric wire (74) arranged in a batch of substantially homogeneous loops in the volume (70) of the reservoir.
