Abstract (en)

[origin: WO9814099A1] A riser or divider construction for fitting to a merchandising shelf comprises a longitudinal separating member (P) and a number of connectors (10) for engaging the member (P) to the shelf. Each connector has a carrier (15) located on the bottom edge of the member (P). A locating pin (16) depends from the carrier (15) for engagement with the merchandising shelf. The carrier (15) is movable along the lower edge of the member (P) so as to align the locating pin (16) with an appropriate orifice in the shelf.
