Abstract (en)

[origin: WO9832608A1] The invention relates to a method and device for generating a printed image on a carrier material. According to this method, areas attracting and areas repelling colour are generated on the surface of a carrier material (20, 40) in accordance with the structure of the image to be printed. As colour-repellent medium a substance present in its solid phase, preferably ice, is used, which is deposited on the surface of the carrier material (20, 40) by condensation.
