Abstract (en)

[origin: WO9822363A1] Disclosed herein are a method of and apparatus for providing a vented closure (10) for a container (48), the closure and container having complementary non gas-tight features (52, 54) by which the closure may be removable attached to close the container, by fitting a venting member (12) to form a liquid-tight, gas-venting seal between the closure and the container and provide a venting gas path from the container through the venting member to atmosphere via the complementary closure and container features; the venting member may replace or by-pass the existing sealing member in a closure.
