Abstract (en)

[origin: FR2756684A1] The invention concerns a device (10) for tactile control of an electrical equipment (2), from a single phase source of alternate voltage (V), comprising: a bi-directional controlled switch, arranged in series with said voltage source and said electric equipment (2); a circuit for controlling this bi-directional switch,; and means for detecting a tactile control, comprising a circuit for processing the leakage current signal picked up on an electrically conductive zone of the electrical equipment.
