Abstract (en)

[origin: EP0955030A2] The apparatus includes underlying support material (7) wound on side shafts (4a,4b) for supporting the patient (9), which includes a pressure-reducing mat (8) made of porous or perforated foam material. The patient is freely suspended on the support material over mattress (3). The position of the patient on the support material (7) may be changed from side to side.
