Abstract (en)  
[origin: EP0955135A2] The system has a cutting unit (2) with a circular blade (8), which is rotatable at the rotationally driven cutting unit. The deposit surface (22) of a reception unit (4), accepting the discs (23), is arranged inclined compared to the horizontal in such a manner, so that between the lower endface of the material line (20) and the deposit surface, a wedge shaped gap is formed, in which the drive arm (6) of the cutting unit penetrates.
