Abstract (en)
[origin: EP0955163A1] The printer cylinder has a register switch pin in the cylinder for the register-aligned installation of the printing form. The alignment is electrically selected with the cylinder position controlled using a light beam. The light source (5) has at least one frame mounted beam collecting sensor (6) which detects the angular position of the cylinder (1). The sensor is connected to a pin (2.1) position processing control and evaluation processor (8) in a signal receiving relationship.
