Abstract (en)
[origin: EP0955407A1] The product band enters a further overlapping, double-sieve band (10, 13) region (20), where coating medium is applied through the sieves. An Independent claim is included for the corresponding papermaking machine. Preferably one sieve has a finer structure differing from that of earlier sieves (2, 6). Coating takes place on one or both sides. Following coating, suction is applied by nozzles or rollers, on the opposite side. Further material is applied and similarly extracted.
