Abstract (en)
[origin: EP0955439A2] The slot spaces (9) form a recess parallel to the side surface of the frame and their opening in the abutment surface extends, with the exception of at least one edge area (12,13), over the complete width of the abutment surface. Each slot space has a base surface (19) running flatly and crossways to the corresponding frame part (1). A narrow side (17) of the slot spaces facing the abutting outer surface (18) of the frame runs parallel to it or with a slight inclination. The flat connecting component (6) virtually fills out the slot space and is glued in it.
