Abstract (en)

[origin: US6276002B1] The present invention is directed to a shower partition, especially a shower blind, which has a housing adapted to be mounted substantially horizontally and open longitudinally on at least one side for guiding a rotary shaft, the shaft being used for receiving a splash guard sheet. Moreover, a mechanism is provided for winding and unwinding the splash guard sheet across the opening of the housing and a drop rod secured to the free end of the splash guard sheet. With the present invention, the splash guard sheet has a pocket formed at the free end thereof for accommodating the drop rod, the drop rod including segmented and/or flexibly interconnected drop rod segments such that the splash guard sheet may substantially follow the inner contour of a tub, shower tray or the like and may approximately adhere to the inside thereof.
