Abstract (en)

[origin: FR2758983A1] The invention concerns an aerosol device consisting of a container containing an aerosol composition consisting of a liquid phase (or juice) containing at least a fixing material in an appropriate solvent and a propellant, and means for dispensing said aerosol composition, the device being capable of providing a flow of dry matter not more than 12 mg/s and a wetting power not more than 100 mg/s. The invention also concerns a method for treating keratinous fibres, which consists in spraying on said fibres a composition containing a fixing material with an device capable of providing a flow of dry matter not more than 12 mg/s and a wetting power not more than 100 mg/s.
