Abstract (en)  
[origin: WO9828574A2] The invention concerns a burner (1), in particular for a gas turbine, combustion air (10) being swirled by means of a swirling element (4) and fuel (11) being admitted into the swirled combustion air (10). At the same time, the pressure loss caused by the swirling element (4) is low. As a result of the invention, NO<sub>x</sub> emission is low whilst the degree of efficiency is almost the same as with conventional burners.
