Abstract (en)
[origin: FR2757257A1] The invention concerns a heat exchanger with plates comprising a plate group (2) formed by a stack of heat exchanging metal plates with undulations, characterised in that the plates define between them channels forming at least a main circuit for a first fluid (A) and N secondary circuits for N fluids (B and C) and extending perpendicularly to said main circuit, each channel of said main circuit being arranged between two channels of the secondary circuits.
