Abstract (en)

[origin: WO9728510A1] The present invention relates to an automated retailing system and to a remote ordering device which may be used in the retailing system. The automated retailing system comprises a plurality of remote ordering devices by which a user may identify himself and order product from remote location or have a product vended locally, where the product is available at the device. A networked capability of the system facilitates the conduct of organised marketing campaigns.
