Abstract (en)
[origin: DE19703977C1] A switching device including a lever system with a switching lever (6) for opening and closing stationary contacts with movable contacts and with a movable breaker element (10) whose movement is coupled with the opening and closing of the fixed contact and movable contact. A detent (11) initially locks the breaker element (10) until closure of the contact in order to create a space between the switching lever (6) and the breaker element (10) for movement of the closure stroke which is set in motion by unlocking of the detent (11).
