Abstract (en)
[origin: WO9821833A1] The present invention relates to a transmitter unit for transmitting radio frequency signals, the transmitter unit comprising: an input for receiving signals to be transmitted, signal processing means for transferring signals to be transmitted on a predetermined frequency level, and amplifier means (2) for amplifying and feeding signals to be transmitted to antenna means of the transmitter unit. For minimizing power losses, the antenna means comprise an antenna element (ANT) attached with an attachment means (3) to an amplifier (2) in the antenna means for forwarding radio signals fed by the amplifier.
