Abstract (en)

[origin: EP0957270A2] The shaft - vane unit (3) comprises a core part, produced from a fibreglass-reinforced plastic with high strength and on all surface areas forming a limitation of a chamber (16) is provided with a covering of rubber-elastic plastic, out of which sealing lips (28',28'') are formed in one piece. Dividing walls (14) on their upper and lower sides on both sides of a circulating seal (20) are provided with a nose formation (49). These formations engage in matching cavities in the face wall of the housing (2).
