Abstract (en)

The present invention relates to a module element (1) for building up a self-supporting inner wall of a composite outer wall of a drying kiln for wooden material. According to the invention the element (1) consists of a metal sheet having flanges (2) along two opposite edges of the sheet which flanges have the same width and are parallel to each other, the web (3) of the metal sheet element, i.e. the part of the metal sheet lying between the flanges (2), having least one part which is inclined in relation to a plane parallel to the edges containing the flanges (2) and perpendicular to the flanges (2)..
